

SUMMARY

A FOLLOW UP STUDY OF COMPREHENSIVE PAEDIATRIC CARE IN KARAIBA VILLAGE

D.R. HAFIZ EL SHAZALI, M.B., B.S.(KHTM)

D.C.H. (LONDON), M.R.C.P. (LONDON)

In 1973 a survey was done. Vital and anthropometrical measurements were made to children five years and under.

The following services were done:

1. A health and nutrition education weekly
2. A high protein meal was given once weekly.
3. Triple and Polioimyelitis vaccines were given
4. Family planning.

This study was made to assess the effect of the above services during the year.
